

Brand Guideline Book

First visual baseline for Kultivate — a calmer dark editorial system for website, content, and digital applications.

What this book does

This guideline translates the approved strategic baseline into a more visual, book-like system. It is the first cohesive guide for how Kultivate should look, speak, and build digital touchpoints.

STATUS

Approved strategic baseline / pending asset completion

Confirmed: positioning, personality, visual system direction, typography, website principles, static Astro direction, bilingual requirement, and documentation governance.

PRIMARY SOURCES

- Kultivate Client Discovery — Strategic Draft V1
- Kultivate Brand Guideline v1.0 / v1.1
- Selected homepage mockup concept 01
- Latest visual references and revision notes

10.0 Motion & UI 12

11.0 Website Direction 13

12.0 AI Documentation 14

1.0 Brand Overview

Kultivate builds a connected digital growth system. Website creates the foundation, SEO improves discoverability, and social media sustains distribution and communication.

PROFESSIONAL

MODERN

CREATIVE

CALM

ESSENCE

Connected Digital Growth

Three services working as one system across foundation, discoverability, distribution, inquiry, and optimization.

1.0 BRAND OVERVIEW

PROMISE

Clarity before complexity

Scope, process, decisions, and evidence must be clear before visual effects or hype.

AUDIENCE

Growing businesses

Founders, business owners, Marketing Leads, Brand Leads, and internal stakeholders in Indonesia.

PRIMARY CTA

Start a Project

Inquiry with objective, needs, timeline, and readiness of materials.

01

Business objective

Get higher-value projects, reduce reliance on referral, and strengthen credibility.

02

Brand objective

Make Kultivate easier to understand, distinct without overclaim, and consistent across website and sales material.

03

Website job

Generate qualified inquiry, show proof, and explain the three services as a connected system.

2.0

Positioning & Messaging

The brand should feel directed, evidence-led, and easy to understand. It must never sound like an unlimited all-in-one vendor or make guarantees it cannot prove.

2.0 POSITIONING & MESSAGING

POSITIONING STATEMENT

For growing businesses that need a more directed digital presence, Kultivate is a digital agency that connects [Website Development](#), [SEO](#), and [Social Media Management](#) into one digital growth system.

BUILD THE FOUNDATION

Website

Clear, fast, accessible, and ready to become the hub of information and conversion.

BE DISCOVERABLE

SEO

Technical foundation, content structure, search intent, and measurement.

STAY CONNECTED

Social

Consistent distribution, communication, and content system.

LEARN & OPTIMIZE

Iteration

Each channel feeds the next decision with evidence and insights.

TONE OF VOICE

Professional, clear, specific

Use Bahasa Indonesia as the default MVP, retain English technical terms when needed, and keep copy concise.

CONFIDENT

NOT LOUD

MODERN

NOT TRENDY

AVOID

Claims such as “best”, “guaranteed ranking”, “guaranteed sales”, “viral”, or unlimited scope. Avoid copy that is generic, too dense, or too jargon-heavy.

3.0

Visual Direction

The updated theme is cooler and more restrained: black-dominant field, blue-cyan illumination, editorial spacing, and calm modular composition.

CORE CUES

DARK FIELD

LIGHT AS MATERIAL

MODULAR EDITORIAL

DIGITAL ORGANIC

Do not copy benchmark layout or artwork directly. Translate the pattern: controlled contrast, restrained glow, large typography, and clean spacing.

DO

Use black backgrounds, localized glow, generous negative space, and fewer words.

DO

Use editorial blocks, balanced asymmetry, and selected work visuals as proof.

DON'T

Do not make the website overly bright, overly dense, or reliant on decorative effects.

4.0

Logo System

The approved logo master is still pending. This first-edition book defines the rules around handling, not a redraw of the final mark.

REQUIRED ASSET PACKAGE

- Primary vector master (SVG / AI / EPS / approved PDF)
- Reverse and monochrome versions
- Clear space, minimum size, favicon, avatar, and misuse examples

4.0 LOGO SYSTEM

Kultivate.

PRIMARY USE

Provisional wordmark
placeholder for layout
planning only.

USAGE RULES

Do not alter proportions, create new symbols, change colors freely, or place the mark on low-contrast backgrounds.

5.0

Color System

The palette is built for digital use: black foundation, electric action blue, cyan illumination, and neutral text that remains legible.

RECOMMENDED PROPORTION

Void/Navy 60% · White/Mist 20% · Electric Blue 12% · Cyan/Ice 6% · Functional accents 2%

Void Black
#070B12

Deep Navy
#0B1322

Electric Blue
#176BFF

Cyan Glow
#67D9FF

Cloud White
#F4F7FB

Mist
#C9D3DF

Steel
#7A8798

Slate
#273244

PRIMARY ACTION

Electric Blue buttons with white text.

ACCENT LIGHT

Cyan Glow only as accent, glow, line, or highlight.

ACCESSIBILITY

Avoid long blue paragraphs and always verify final contrast.

6.0

Typography

Instrument Sans is the anchor font. Space Mono supports labels, metadata, tags, and data moments. The guideline PDF may use a substitute font for rendering, but implementation should follow the official pair.

USAGE RULES

- Short, strong headings with clear hierarchy
- Body length around 55–75 characters per line
- Uppercase only for short labels and metadata
- Use CSS `clamp()` in implementation

PRIMARY / SANS

Aa

Instrument
Sans

Modern, precise, calm,
and highly usable.

6.0 TYPOGRAPHY

SUPPORT / MONO

01

Space
Mono

SEO_SCORE
92

HIERARCHY

Display /
H1

Heading / H2-
H4

Body text / Caption / Label

EDITORIAL CHARACTER

Large
headings,
sharp spacing,
and reduced
text density.
Typography
should do
more of the
communication
work.

7.0 Imagery

Photography must show real people, work, and systems — not generic corporate stock. Treat blue as a lighting mood, not as a filter that hides reality.

DO

Show real process, interfaces, workshop moments, team context, and selective device / project visuals.

DON'T

Avoid handshake stock photos, fake glow, heavy blur, or cyan skin tones.

8.0

Graphic Elements

Supporting graphics should explain systems, not distract from them. Every element must have a role.

CONNECTED NODES

Show relationships between service, content, data, and next action.

LIGHT FIELD

A single dominant glow creates depth, focus, and transition.

8.0 GRAPHIC ELEMENTS ORGANIC CURVE

Soft curves imply cultivation without literal plant symbols.

EXPANDING GRID

Grid reflects scale, architecture, and structure.

MODULAR BLOCK

Blocks support service architecture, deliverables, and case study metadata.

TECHNICAL LINE

Hairlines and annotations add precision without turning the system into sci-fi UI.

ICONOGRAPHY DIRECTION

Use outline icons with light stroke, moderate rounded joins, and small-size clarity. Keep icons lightweight and secondary to labels.

9.0

Layout & Grid

The system should feel spacious, aligned, and modular. Avoid condensed placement and let content breathe.

GRID BASELINE

Desktop
12 columns

Tablet
8 columns

Mobile
4 columns

9.0 LAYOUT & GRID

MAX WIDTH

1280–1440 px

Use wider content containers than before.

BASE SPACE

8 px

Section spacing: 96–160 px depending on importance.

RADII

12–24 px

Rounded but not playful.

BORDER

1 px subtle

Use border tone, not heavy outlines.

RULES

- One main job per section.
- Asymmetry happens inside the grid, not outside it.
- Negative space should improve hierarchy, not waste space.
- Mobile layout is redesigned, not simply stacked.

10.0

Motion & UI

Motion exists to clarify state and interaction. For the selected direction, motion is restrained, with emphasis on hover, focus, reveal, and page rhythm.

SELECTED WEBSITE APPROACH

Static-first. No heavy WebGL. No scroll hijacking. No effect that hides critical content.

10.0 MOTION & UI

MICRO INTERACTIONS

150-250
ms

CTA, focus,
icon, tooltip.

IMAGE / CARD

300-
600 ms

Reveal,
scale, or
crossfade.

SECTION TRANSITION

500-800
ms

Limited
stagger,
directional
movement.

NON-NEGOTIABLES

- Implement prefers-reduced-motion.
- Visible focus states and keyboard navigation are mandatory.
- Use responsive images, modern formats, and [lazy loading](#) below the fold.
- Keep the interface calm and performance-friendly.

11.0

Website Direction

The site will be built with Astro as a static website. It should feel minimal, bilingual, fast, and proof-driven — similar in clarity to Antikode, but visually aligned with Kultivate’s calmer dark system.

IMPLEMENTATION RULES

- Astro framework, static-first, no custom backend.
- Bilingual: Bahasa Indonesia and English.
- Reduced homepage copy.
- Selected work and services become the main proof layers.

11.0 WEBSITE DIRECTION

HOMEPAGE ANATOMY

Hero → Selected Work → Three Services → Connected System →
Why Kultivate → Process → Insights → Final CTA

NAVIGATION

Work / Services / About / Insights /
Contact / Start a Project

PERFORMANCE

Hero asset prioritized. Below-fold media
uses lazy loading. Keep JS light.

CONTENT STYLE

Short headlines, fewer paragraphs,
strong spacing, less condensed
composition.

12.0

AI Documentation Governance

The project must remain readable even for an AI that has never seen the repository. Documentation is part of the product, not an optional note.

ALWAYS DO THIS

Before implementing, read all existing project Markdown files. If a needed file does not exist, create it. After implementing, update the relevant files so the context stays current.

DEFINITION OF DONE

A task is not complete while the relevant Markdown context is stale. Design, structure, copy, or technical changes must be reflected in the documentation pack.

12.0 AI DOCUMENTATION GOVERNANCE

README.md

Project quickstart and structure.

PROJECT_CONTEXT.md

Core context and constraints.

WEBSITE_BLUEPRINT.md

Structure, pages, CTA, and logic.
