

OPERATING MANUAL / TRAINING SYSTEM / AI PROTOCOL

COPYWRITING OPERATING MANUAL

Human Training Module + AI Copywriting Instruction System

Version 1.0

A repeatable system for moving from raw information to strategy, copy, revision, validation, and final approval - without inventing facts or sacrificing clarity for persuasion.

Business Goal -> Audience Need -> Message -> Proof -> Action

Contents

COPYWRITING OPERATING MANUAL

PART I - SYSTEM FOUNDATION

1. Introduction
2. Copywriting and Related Disciplines
3. Four Requirements of Strong Copy
4. Concrete Copy Test

PART II - INFORMATION AND SOURCE MANAGEMENT

5. Factual Integrity System
6. Prohibited Factual Invention
7. Source of Truth System
8. Source Conflict Protocol
9. Information-Missing Protocol

PART III - RESEARCH BEFORE WRITING

10. Research Operating Model
11. Business Research
12. Audience Research
13. Product and Service Research
14. Competitor Messaging Research
15. Voice-of-Customer Research

PART IV - COPY STRATEGY

16. Copy Strategy
17. Copy Strategy Brief Template
18. Positioning
19. Message Hierarchy

PART V - MESSAGING, BENEFITS, AND VALUE

20. Feature & Benefit & Outcome
21. Value Proposition
22. Main Promise
23. Specificity

PART VI - HEADLINE WRITING

24. Headline Purpose
25. Headline Rules

PART VII - BODY COPY

26. Body Copy Structure

PART VIII - CTA WRITING

27. CTA Framework

PART IX - PROOF AND TRUST

28. Proof Types and Validation

PART X - OBJECTION HANDLING

29. Objection Handling

PART XI - BRAND VOICE AND TONE

30. Voice vs Tone

PART XII - NATURAL LANGUAGE AND ANTI-AI-SLOP

31. Anti-AI-Slop Rules
32. Clarity Rules

PART XIII - ETHICAL PERSUASION

33. Persuasion Principles

PART XIV - COPYWRITING FRAMEWORKS

34. Framework Rule
35. AIDA
36. PAS
37. BAB
38. FAB
39. 4Ps
40. Jobs-to-be-Done
41. Problem & Solution & Proof & Action

PART XV - WEBSITE COPYWRITING

42. Homepage
43. About Page
44. Service Page
45. Product Page
46. Landing Page
47. Pricing Page
48. Contact Page
49. FAQ
50. Case Study
51. Blog or Article

PART XVI - UX WRITING

- 52. UX Writing Principles
- 53. Buttons
- 54. Forms, Labels, and Placeholder Text
- 55. Error Messages
- 56. Empty States
- 57. Confirmation Messages
- 58. Tooltips, Alerts, and Modals

PART XVII - SEO COPYWRITING

- 59. SEO Operating Principle

PART XVIII - AEO / ANSWER-ORIENTED WRITING

- 60. AEO Principles

PART XIX - B2B AND B2C

- 61. B2B Copywriting
- 62. B2C Copywriting

PART XX - HIGH-CONSIDERATION SERVICES

- 63. High-Consideration Categories

PART XXI - EDITING SYSTEM

- 64. Ten-Pass Editing Method

PART XXII - CLAIM AUDIT

- 65. Claim Audit Process
- 66. Claim Register Template

PART XXIII - CONSISTENCY AUDIT

- 67. Cross-Page Consistency

PART XXIV - COPY QUALITY SCORING SYSTEM

- 68. Scoring Rubric

PART XXV - COPY INVENTORY

- 69. Copy Inventory

PART XXVI - REUSABLE TEMPLATES

- 70. Copywriting Project Brief
- 71. Copy Research Sheet
- 72. Audience Profile
- 73. Voice-of-Customer Sheet
- 74. Competitor Messaging Analysis

- 75. Copy Strategy Brief
- 76. Positioning Statement
- 77. Value Proposition Template
- 78. Message Hierarchy Template
- 79. Page Copy Brief
- 80. Website Content Sheet
- 81. Headline Exploration
- 82. CTA Exploration
- 83. Objection Matrix
- 84. Proof Inventory
- 85. Claim Register
- 86. Missing Information Register
- 87. Copy Review Sheet
- 88. Final Copy Sheet
- 89. AI Copy Generation Brief

PART XXVII - TESTABLE CHECKLISTS

- 90. Pre-Writing Checklist
- 91. Research Checklist
- 92. Strategy Checklist
- 93. Headline Checklist
- 94. Body Copy Checklist
- 95. CTA Checklist
- 96. Brand Voice Checklist
- 97. SEO Checklist
- 98. UX Writing Checklist
- 99. Claim Verification Checklist
- 100. Anti-Hallucination Checklist
- 101. Editing Checklist
- 102. Cross-Page Consistency Checklist
- 103. Final QA Checklist

PART XXVIII - COMPLETE COPYWORK FLOW

- 104. Phase 1 - Intake
- 105. Phase 2 - Source Validation
- 106. Phase 3 - Research
- 107. Phase 4 - Strategy
- 108. Phase 5 - Architecture
- 109. Phase 6 - Drafting
- 110. Phase 7 - Editing
- 111. Phase 8 - Claim Audit

- 112. Phase 9 - Consistency Audit
- 113. Phase 10 - UX Review
- 114. Phase 11 - Stakeholder Validation
- 115. Phase 12 - Finalization

PART XXIX - AI COPYWRITING PROTOCOL

- 116. AI Anti-Hallucination Protocol
- 117. AI Creative Decision System
- 118. AI Stop Conditions

PART XXX - AI MASTER COPYWRITING PROTOCOL

- 119. AI Role
- 120. Objectives
- 121. Source Priority
- 122. Required Inputs
- 123. Pre-Writing Analysis
- 124. Research Rules
- 125. Strategy Rules
- 126. Writing Rules
- 127. Headline Rules
- 128. Body Copy Rules

- 129. CTA Rules
- 130. Voice and Tone Rules
- 131. SEO Rules
- 132. UX Rules
- 133. Factual Integrity Rules
- 134. Missing Information Protocol
- 135. Contradiction Protocol
- 136. Editing Process
- 137. Claim Audit
- 138. Consistency Audit
- 139. Self-Evaluation
- 140. Output Format
- 141. Prohibited Behaviors
- 142. Final Approval Criteria

PART XXXI - MASTER OPERATING PRINCIPLES

- 143. Twenty Rules to Remember

FINAL MASTER CHECKLIST

Closing Principle

Version: 1.0

Purpose: A repeatable system for researching, planning, writing, reviewing, validating, and finalizing copy without inventing information or sacrificing clarity for persuasion.

Operating principle: Good copy is not impressive wording. It is the clearest defensible expression of what the audience needs to understand, why it matters, why they should believe it, and what they should do next.

PART I - SYSTEM FOUNDATION

1. Introduction

Purpose

This manual turns copywriting into an operating process:

Raw Information -> Source Validation -> Research -> Strategy -> Architecture -> Draft -> Revision -> Claim Audit -> Consistency Audit -> Validation -> Final Copy

It is designed for two users:

1. **Human copywriters, strategists, marketers, designers, editors, and reviewers.**
2. **AI systems generating, revising, evaluating, or auditing copy.**

The goal is not to produce copy that merely sounds polished. The goal is to produce copy that is:

- Accurate
- Relevant
- Specific
- Credible
- Persuasive
- Differentiated where evidence permits
- Easy to understand
- Appropriate to its context
- Consistent with the brand
- Useful to the reader
- Aligned with operational reality
- Capable of directing the reader toward an appropriate next action

Core Principle

Good copy connects:

Business Goal -> Audience Need -> Message -> Proof -> Action

If one of those elements is missing, copy quality usually declines.

Rules

1. Never begin important copy by asking only, "What should we write?"
2. Establish what the business needs the copy to accomplish.
3. Identify who is reading and what they need to understand.
4. Determine what can truthfully be said.
5. Determine what evidence is available.
6. Determine the intended next action.
7. Write only after the information is sufficiently clear for the level of risk involved.

Step-by-Step Process

Input - Project brief, source materials, audience information, offer information, page/channel context.

Analysis - Determine objective, audience, awareness, evidence, objections, and constraints.

Decision - Choose message hierarchy, proof, CTA, tone, and degree of specificity.

Execution - Draft copy appropriate to the medium.

Validation - Run claim, consistency, clarity, UX, brand, and quality checks.

Output - Final copy plus unresolved-information registers where required.

AI Instruction Segment

AI Objective: Produce or evaluate copy as the result of a controlled communication process rather than unconstrained text generation.

Required Inputs:

- Project objective
- Audience information
- Product/service information
- Available sources
- Brand rules
- Intended page/channel
- Desired action
- Supporting evidence

Instructions:

1. Establish factual information before drafting.
2. Determine the communication objective.
3. Identify the intended audience.

4. Determine the most important message.
5. Determine what evidence can be used.
6. Determine the required next action.
7. Draft only after the above are sufficiently defined.
8. Audit the draft before finalizing.

Must Do: Preserve uncertainty, distinguish evidence from interpretation, prioritize comprehension before cleverness, and match copy to actual capability.

Must Not Do: Fill missing facts with plausible inventions, treat recommendations as existing facts, create unsupported differentiation, or create fake urgency, proof, or authority.

Self-Check:

- Can the communication objective be stated in one sentence?
 - Can the target reader be identified?
 - Can every material factual claim be traced to evidence?
 - Is the next action clear?
-

2. Copywriting and Related Disciplines

Copywriting

Copywriting is writing designed to influence understanding, perception, decision-making, or action. Examples include homepage hero copy, landing pages, service pages, product descriptions, advertisements, CTAs, promotional email, and sales collateral.

Copywriting is not automatically aggressive sales writing. Good copy may simply help someone understand enough to make a decision.

Content Writing

Content writing primarily educates, informs, explains, or maintains audience engagement. Examples include articles, guides, tutorials, reports, and educational newsletters. It can contain persuasive elements, but persuasion is not always its primary job.

UX Writing

UX writing helps users operate an interface. It covers buttons, labels, error messages, form instructions, empty states, confirmation messages, navigation, and other interface language. Its priority is usability.

Brand Messaging

Brand messaging defines what an organization repeatedly communicates about who it is, what it does, who it serves, why it matters, how it differs, and what evidence supports those messages.

Marketing Communication

Marketing communication is the wider system through which a business communicates with a market. Copywriting is one component of that system.

Technical Writing

Technical writing explains systems, specifications, procedures, or complex subjects accurately. The priority is precision and comprehension.

SEO Copywriting

SEO copywriting combines useful copy with search-intent alignment and discoverability. SEO does not override readability or factual integrity.

Rule: Write for intent first. Optimize wording second.

AI Instruction Segment

Decision Logic:

- **IF** the dominant task is persuasion -> use copywriting principles.
 - **IF** the dominant task is instruction or education -> prioritize content or technical-writing principles.
 - **IF** the user is operating an interface -> prioritize UX writing.
 - **IF** the material must satisfy search intent -> combine the appropriate writing mode with SEO.
 - **IF** several functions are present -> identify the dominant function for each section instead of forcing one style everywhere.
-

3. Four Requirements of Strong Copy

Every meaningful piece of copy should be tested for four requirements.

3.1 Comprehension

Can the intended reader understand it?

3.2 Relevance

Does the reader care about the message in the current context?

3.3 Credibility

Can the reader reasonably believe it based on available proof and wording strength?

3.4 Direction

Does the reader understand what to do next?

Copy that lacks any of the four is incomplete.

Validation Checklist

- Can the intended reader identify the main subject without decoding jargon?
- Does the message connect to a real audience problem, goal, or decision?
- Does the wording match the available evidence?
- Is the next step obvious where an action is required?

AI Instruction Segment

Before finalizing a section, classify any weakness as **Comprehension**, **Relevance**, **Credibility**, or **Direction**. Revise the specific weakness rather than making the copy generically "stronger."

4. Concrete Copy Test

A useful creative review test asks:

1. **Can I visualize it?**
2. **Can I falsify or verify it?**
3. **Could a competitor say exactly the same thing?**

This test is especially useful for removing generic corporate language. It should not be used mechanically. Abstract concepts such as trust, compliance, creativity, or reliability may be necessary, but they should usually be supported by observable evidence, behavior, process, or detail.

Weak

We provide innovative solutions that empower business growth.

Problem

- Difficult to visualize.
- Difficult to verify.
- Almost any company could say it.

Improved - HYPOTHETICAL EXAMPLE

Track every client inquiry from first contact to signed proposal in one workspace.

Why It Works

The reader can picture the action and evaluate whether the product actually performs it.

Fast-Comprehension Test

For attention-constrained contexts, ask whether the intended reader can understand the main point after roughly one or two seconds of attention. This is especially useful for:

- Hero sections
- Advertisements
- Billboards
- Navigation
- Buttons
- Social posts
- Short landing-page sections

Precautions

- Do not fabricate concrete detail merely to make copy vivid.
- Do not confuse "unique wording" with a genuine differentiator.
- A competitor may be unable to copy a sentence because the sentence is bizarre; that does not make it strategically useful.

AI Instruction Segment

- **IF** the sentence is dominated by abstract adjectives -> identify what observable fact, action, object, behavior, process, or result the adjective refers to.
 - **IF** a concrete version exists without inventing detail -> prefer the concrete version.
 - **IF** making it concrete requires invented information -> keep the claim qualified or request evidence.
 - **IF** a competitor could use the sentence unchanged -> search available information for legitimate specificity or differentiation.
 - **IF** differentiation is unavailable -> do not fabricate one.
-

PART II - INFORMATION AND SOURCE MANAGEMENT

5. Factual Integrity System

Purpose

Copy must distinguish what is known from what is merely plausible. The following status system prevents assumptions and placeholders from becoming public facts.

Status	Meaning	Public Use
CONFIRMED	Supported by authoritative approved evidence	Can normally be used
SUPPORTED	Reasonably supported, but final validation may still be advisable	Use carefully; qualify if necessary
PLACEHOLDER	Deliberately temporary information	Never publish as verified fact
ASSUMPTION	Working interpretation used for planning	Must not appear as public fact
MISSING	Required information is unavailable	Flag or rewrite around it
CONFLICTING	Available sources disagree	Resolve or flag before use

CONFIRMED

Examples include an official product document confirming a feature, client-approved company information, or a current approved pricing sheet.

Action: Use normally while respecting exact scope and wording.

SUPPORTED

Example: an internal process document states that a service is offered, but public wording has not yet been approved.

Action: Use only where appropriate, mark for review when material, and do not strengthen the claim beyond its source.

PLACEHOLDER

Example:

[PLACEHOLDER: Insert verified number of completed projects.]

Action: Keep visibly labeled. Never silently turn it into a realistic number.

ASSUMPTION

Example: "The primary visitor is probably a business owner." If research has not established this, it is an assumption.

Action: Use for planning only.

MISSING

Example: exact pricing is required by the page design but no approved price exists.

Action: Flag the missing information or redesign the message so the unavailable fact is not fabricated.

CONFLICTING

Example: one source says the company was established in 2018 and another says 2020.

Action: Do not choose randomly. Apply the conflict protocol.

Validation Checklist

- Has every material fact been assigned a status?
- Are placeholders visibly distinguishable from public copy?
- Are assumptions prevented from entering final copy?
- Are unresolved conflicts recorded?
- Is claim strength no stronger than evidence strength?

AI Instruction Segment

AI Objective: Preserve the epistemic status of information.

Must Do: Attach a status mentally or explicitly to every material factual input.

Must Not Do: Convert a plausible statement into a fact merely because it makes the draft more complete.

6. Prohibited Factual Invention

The copywriter or AI must never invent:

- Statistics
- Testimonials
- Reviews
- Customers
- Client names
- Certifications
- Awards
- Credentials

- Case studies
- Company history
- Product capabilities
- Service coverage
- Pricing
- Performance numbers
- ROI
- Market share
- Guarantees
- Regulatory approval
- Legal claims
- Professional qualifications
- Delivery times
- Team size
- Project counts
- Locations
- Partnerships

Never transform:

We plan to introduce this capability.

into:

We provide this capability.

Never transform:

Potential integration with Platform X.

into:

Integrates with Platform X.

Precaution

A realistic detail is still fabricated if no source supports it.

AI Instruction Segment

IF a detail is likely true but unverified -> do not publish it as fact.

IF a number would make the copy stronger but no source exists -> omit the number or use a labeled placeholder.

IF an expected capability is on a roadmap -> describe it as planned only if that statement itself is authorized.

7. Source of Truth System

Purpose

Before writing, establish which sources control factual decisions.

A default hierarchy is:

1. Current client-approved official information
2. Current product/service documentation
3. Approved brand strategy or discovery documents
4. Verified internal operational information
5. Current official website
6. Approved marketing materials
7. Reliable external research
8. Assumptions or placeholders

This order is not universal. A project may explicitly define another hierarchy.

Example

A redesign project may state:

The current approved service catalogue supersedes the old website.

In that project, the service catalogue outranks the website.

Rules

- Record the hierarchy before major drafting.
- Distinguish current approved information from legacy material.
- Rank sources based on authority, approval, recency, and relevance.
- Do not allow external research to overwrite client-specific facts unless explicitly authorized and verified.

AI Instruction Segment

Use the project-defined hierarchy when present. Otherwise apply the default hierarchy. When a lower-priority source contradicts a higher-priority source, do not silently blend them.

8. Source Conflict Protocol

Step 1 - Detect

Identify the conflicting statement.

Step 2 - Record

Conflict Detected

Topic: Year Established

Source A: 2018 - Existing Website

Source B: 2020 - Client-Approved Corporate Profile

Step 3 - Analyze

Compare:

- Authority
- Approval status
- Recency
- Relevance
- Specificity
- Intended scope

Step 4 - Decide

Use the designated Source of Truth where the hierarchy clearly resolves the conflict.

Step 5 - Escalate

If two high-authority sources conflict and the hierarchy does not resolve them, write:

[NEEDS CONFIRMATION: Establishment year differs between Source A and Source B.]

Step 6 - Protect Public Copy

Never silently merge contradictory information.

AI Instruction Segment

- **IF** one source clearly outranks another -> use the higher-priority source and record the discrepancy when material.
- **IF** equally authoritative sources disagree -> mark **CONFLICTING**.
- **IF** no authoritative source exists -> mark **MISSING** or **ASSUMPTION**.
- **IF** the information is unnecessary for the communication objective -> consider removing the claim rather than forcing resolution.

Must Not Do: Average conflicting numbers, choose the more persuasive answer, use whichever source appears first, or present both as though both are true.

9. Information-Missing Protocol

Non-Critical

The copy can proceed safely without the information.

Action: Omit it where possible.

Important

The information affects quality but does not make safe drafting impossible.

Action: Continue where safe, add the gap to the Missing Information Register, and use a placeholder only where genuinely necessary.

Critical

The information directly affects whether a factual statement is true.

Examples:

- Certification status
- Legal qualification
- Pricing
- Guaranteed performance
- Medical capability
- Financial return

Action: Do not infer. Use [NEEDS CONFIRMATION] .

Decision Logic

- **IF** missing information is non-critical -> continue without it.
 - **IF** important -> proceed safely and record the gap.
 - **IF** critical -> stop factual finalization of the affected claim.
-

PART III - RESEARCH BEFORE WRITING

10. Research Operating Model

Writing quality cannot exceed the quality of information available.

Use:

Input -> Collection -> Classification -> Analysis -> Strategic Relevance -> Output

Research should answer:

What does the business know that the customer needs to understand?

Required Research Areas

1. Business
2. Audience
3. Product/service
4. Market and competitors
5. Voice of Customer
6. Proof
7. Constraints

AI Instruction Segment

Separate collected information into **fact**, **observation**, **interpretation**, and **recommendation**. Do not merge them into one undifferentiated summary.

11. Business Research

Required Questions

- What does the organization sell?
- How does it make money?
- What business model does it use?
- What markets does it serve?
- What are its operational constraints?
- What can it actually deliver?

- What does it intentionally not offer?
- What does the sales process look like?
- Where is risk concentrated?
- What differentiators are supported?
- What claims require approval?

Output

A Business Context Summary containing:

- Offer
- Revenue model
- Market
- Constraints
- Advantages
- Limitations
- Evidence available

Common Mistakes

- Describing the business only from its website headline.
- Confusing planned services with current services.
- Assuming a standard industry revenue model.
- Ignoring operational constraints that affect claims.

AI Instruction Segment

Do not infer a business model merely from industry convention. If operational documentation contradicts marketing language, flag the discrepancy.

12. Audience Research

Audience research should identify:

- Primary audience
- Secondary audiences
- User context
- Existing knowledge
- Awareness level
- Goals
- Problems
- Fears
- Motivations

- Objections
- Decision criteria
- Vocabulary
- Questions
- Constraints
- Purchase triggers
- Alternative solutions

Awareness Levels

Unaware - Does not recognize the problem.

Problem-Aware - Recognizes the problem but not necessarily the solution.

Solution-Aware - Understands that solutions exist.

Product/Provider-Aware - Knows specific products or providers.

Decision-Ready - Actively comparing or preparing to act.

Decision Logic

- **IF** awareness is low -> spend more copy establishing the problem and relevance.
- **IF** awareness is high -> prioritize differentiation, proof, scope, risk, and action.
- **IF** awareness is uncertain -> avoid assuming expert knowledge; use progressive disclosure.

Precautions

Do not invent audience fears because they sound persuasive. Use evidence from research or label the idea as a hypothesis.

13. Product and Service Research

Document:

- Features
- Functional benefits
- User benefits
- Outcomes
- Deliverables
- Process
- Scope
- Exclusions
- Limitations
- Pricing
- Requirements
- Dependencies

- Time expectations
- Proof
- Support model
- Risks

Rule

Benefits and outcomes must follow logically from actual capability.

AI Instruction Segment

For every promised benefit, identify the feature, process, or service action that creates it. If no causal path exists, the claim is unsupported.

14. Competitor Messaging Research

Purpose

Use competitor research to understand:

- Category conventions
- Expected information
- Messaging patterns
- Positioning
- Audience assumptions
- Proof strategies
- Common promises
- Messaging gaps
- Differentiation opportunities

Rule

Competitor research is for understanding the market, not for rewriting competitor copy.

Ask:

What can we learn about the category?

Not:

What sentence should we copy and modify?

Required Output

For each competitor record:

- Main positioning
- Main promise
- Core audience
- Primary proof
- Main CTA
- Repeated vocabulary
- Strengths
- Weaknesses
- Opportunities for differentiation

AI Instruction Segment

Must Not Do: Assume the client offers a feature because competitors do, or use competitor claims as evidence of client capability.

15. Voice-of-Customer Research

Voice-of-Customer or **VOC** refers to patterns and language gathered from actual or prospective customers.

Sources

- Interviews
- Reviews
- Sales calls
- Customer support
- Search queries
- Forums
- Surveys
- Inquiry forms
- Customer emails
- Product feedback

Extract

- Repeated problems
- Exact questions
- Desired outcomes
- Objections
- Decision criteria

- Vocabulary
- Emotional language
- Misunderstandings
- Alternatives customers mention

Critical Distinction

VOC research identifies patterns. It does not automatically authorize copying customer statements publicly.

Consider privacy, consent, confidentiality, attribution, context, and representativeness.

AI Instruction Segment

- Separate observation from inference.
 - Preserve important customer terminology.
 - Do not fabricate VOC quotations.
 - Do not present synthesized language as a real customer quote.
 - Do not treat one anecdote as representative without justification.
-

PART IV - COPY STRATEGY

16. Copy Strategy

Do not draft important conversion copy before defining strategy.

A minimum Copy Strategy Brief should establish:

1. Primary objective
2. Primary audience
3. Awareness level
4. Primary problem
5. Desired outcome
6. Core value proposition
7. Differentiator
8. Main promise
9. Available proof
10. Primary objection
11. Primary CTA
12. Secondary CTA
13. Tone
14. Message hierarchy

AI Instruction Segment

Do not begin full drafting until enough information exists to answer:

- Who?
- Why?
- What?
- Why this?
- Why believe?
- What next?

If one is missing, obtain it, label the gap, or write around it without inventing it.

17. Copy Strategy Brief Template

Project: [Name]

Asset: [Homepage / landing page / campaign / etc.]

Primary Objective: [What business outcome should this copy support?]

Primary Audience: [Who specifically?]

Audience Context: [What situation are they in?]

Awareness Level: [Unaware / problem-aware / solution-aware / provider-aware / decision-ready]

Primary Problem: [Problem]

Desired Outcome: [Outcome]

Core Value Proposition: [Statement]

Main Differentiator: [Verified differentiator or MISSING]

Main Promise: [What can truthfully be promised?]

Available Proof: [List]

Primary Objection: [Objection]

Primary CTA: [Action]

Secondary CTA: [Optional action]

Voice/Tone: [Description]

Constraints: [Legal / technical / operational / design]

18. Positioning

Positioning establishes how an offer should be understood relative to alternatives.

Identify:

- Category
- Target audience
- Existing alternative
- Differentiator
- Value
- Proof

Internal Positioning Formula

For [audience] who need [progress/problem], [brand/product] is a [category] that [value]. Unlike [relevant alternative], it [supported differentiator], supported by [proof].

Do not force this formula into public copy. Its purpose is strategic clarity.

Precaution

Do not invent differentiation because a strategy document expects one. If no meaningful differentiator has been established, write:

Differentiator: [NEEDS STRATEGIC VALIDATION]

AI Instruction Segment

- **IF** competitor analysis and source material support a meaningful difference -> use it.
- **IF** the difference is merely aspirational -> treat it as a recommendation, not current positioning proof.
- **IF** no differentiation is supported -> prioritize category clarity and audience relevance.

19. Message Hierarchy

Users rarely read everything. The most important messages should appear first.

A default sequence is:

1. What is this?
2. Is this relevant to me?
3. What problem does it solve?
4. Why should I care?
5. Why this company or product?
6. How does it work?
7. Can I trust it?
8. What should I do next?

Hierarchy by Page Type

Page	Early Priority	Later Priority
Homepage	Orientation, relevance, positioning	Proof, routing, CTA
Landing Page	Offer, problem, benefit	Proof, objection, CTA
Service Page	Service definition, fit, scope	Process, proof, CTA
About Page	Identity, relevant story	Approach, credentials, CTA
Product Page	Product, use case, benefit	Capability, proof, purchase
Pricing Page	Price, plan differences	Conditions, FAQ, CTA
Contact Page	Contact purpose, expectations	Form guidance, submission
Article	User question, direct answer	Evidence, detail, next step

AI Decision Logic

- **IF** readers need orientation -> lead with category and relevance.

- **IF** readers understand the category -> lead with value, differentiation, or decision criteria.
 - **IF** perceived risk is high -> move proof, scope, and process earlier.
-

PART V - MESSAGING, BENEFITS, AND VALUE

20. Feature -> Benefit -> Outcome

Feature

What the product or service has or does.

Automated weekly reporting.

Functional Benefit

What the feature enables.

Performance data is collected automatically.

User Benefit

Why it matters to the customer.

Your team spends less time compiling reports manually.

Outcome

What may improve after using it.

More time can be spent interpreting results and deciding what to do next.

Evidence Rule

The further a statement moves from direct functionality toward business impact, the more evidence may be required.

Supported: Automatically consolidates weekly performance data.

Requires more evidence: Saves every manager five hours each week.

Requires significant evidence: Increases company profitability by 30%.

AI Instruction Segment

For every benefit:

1. Identify the underlying feature or service.
2. Explain the causal connection.
3. Determine whether the claim is direct or inferred.
4. Determine whether evidence is required.
5. Reduce claim strength if evidence is insufficient.

IF the benefit does not logically follow from capability -> remove it.

21. Value Proposition

A value proposition communicates why the offer matters to a particular audience.

It typically clarifies some combination of:

- Audience
- Problem
- Solution
- Differentiator
- Outcome

Not every public value proposition needs all five explicitly.

Internal Formulas

Formula A

Help **[audience]** achieve **[outcome]** by **[solution]** without **[relevant friction]**.

Formula B

[Product/category] for **[audience]** that **[main value]**, supported by **[differentiator]**.

Formula C

[Specific capability] so **[audience]** can **[meaningful benefit]**.

Value Proposition Test

Evaluate whether it is:

- Clear
- Relevant
- Specific
- Credible
- Differentiated
- Easy to understand

Weak - HYPOTHETICAL EXAMPLE

Transforming businesses through innovative digital excellence.

Improved - HYPOTHETICAL EXAMPLE

Website, SEO, and social media services for businesses that want one team managing their core digital presence.

Use the improved version only if it accurately describes the business.

AI Instruction Segment

Do not force a formula into unnatural public wording. Use formulas to test strategic completeness, then write natural copy.

22. Main Promise

A promise is the progress the offer commits to helping create.

Promise strength must match evidence.

Lower Risk

We help businesses organize and manage their licensing requirements.

Higher Risk

We guarantee your license will be approved.

The second statement depends on external decision-makers and should not be used unless the guarantee is legitimate, supportable, and appropriately qualified.

AI Instruction Segment

IF an outcome depends on regulators, markets, health outcomes, user behavior, or other external systems -> avoid unconditional guarantees unless formally supported and permitted.

23. Specificity

Vague:

Improve your operations.

Specific:

Track every client inquiry from first contact to signed proposal.

Specificity can come from:

- Audience
- Action
- Object
- Context
- Time
- Scale
- Outcome
- Constraint
- Process
- Deliverable

Rule

Specificity must come from information. Never fabricate specificity merely because specific copy sounds stronger.

AI Instruction Segment

When copy is vague, identify which dimension can be made more specific using verified information. If none is available, do not invent detail.

PART VI - HEADLINE WRITING

24. Headline Purpose

A headline earns the next moment of attention. Its job may include:

- Identifying the offer
- Establishing relevance
- Communicating value
- Creating contrast
- Raising an important question
- Presenting a specific outcome

Headline Types

Value-Proposition Headline

Best when orientation and value are needed immediately.

HYPOTHETICAL EXAMPLE: **Compliance Support for Growing Manufacturing Businesses**

Benefit-Led

Best when the benefit is clear and supported.

HYPOTHETICAL EXAMPLE: **Keep Project Approvals Moving Without Losing Track of Requirements**

Problem-Led

Best when the audience already recognizes the problem.

HYPOTHETICAL EXAMPLE: **Still Managing Client Requests Across Email, Chat, and Spreadsheets?**

Do not dramatize minor problems.

Outcome-Led

Use when the outcome is meaningful and supportable.

Category-Led

Useful in unfamiliar categories.

HYPOTHETICAL EXAMPLE: **An Internal Task Management System for Multi-Team Operations**

Differentiation-Led

Use only when differentiation is validated.

Specificity-Led

Useful where concrete detail itself is persuasive.

HYPOTHETICAL EXAMPLE: **One Dashboard for Tasks, Owners, Deadlines, and Approval Status**

Question

Use when the question reflects a real user concern. Avoid artificial questions whose answer is obvious.

Command

Useful for direct actions, such as **Compare Plans**.

Contrarian

Useful when the brand has a legitimate alternative point of view. Contrarian does not mean deliberately inflammatory.

Curiosity-Based

Useful only when the copy quickly satisfies the curiosity created. Never use deceptive information gaps.

25. Headline Rules

A strong headline should usually be:

- Understandable
- Relevant
- Specific enough
- Credible
- Contextually appropriate
- Consistent with the offer

Avoid

- Empty cleverness
- Fake urgency
- Clickbait
- Unnecessary ambiguity
- Generic corporate language
- Unsupported superlatives
- Excessive abstraction
- Headlines that require several sentences before the offer makes sense

Subheadline Rule

A subheadline should add information, not merely restate the headline.

Headline: Manage Every Client Inquiry in One Place

Weak Subheadline: A better way to manage your client inquiries.

Better - HYPOTHETICAL EXAMPLE: Assign owners, track follow-ups, record status changes, and keep each opportunity visible from first contact to close.

Validation Checklist

- Can a first-time reader understand the main message quickly?
- Does the headline match what follows?
- Is it relevant to the intended audience?
- Does it avoid unsupported superiority?
- Can abstract wording be replaced with verified concrete wording?
- Could ten competitors use it unchanged?
- Does the subheadline add useful information?

AI Instruction Segment

- **IF** creativity reduces comprehension -> choose clarity.
 - **IF** category is unfamiliar -> identify the category earlier.
 - **IF** the headline makes a result claim -> verify evidence.
 - **IF** the headline could describe many competitors -> search for supported specificity.
 - **IF** no differentiator exists -> prefer relevance and clarity over invented uniqueness.
-

PART VII - BODY COPY

26. Body Copy Structure

A common sequence is:

1. Opening
2. Context
3. Problem
4. Consequence
5. Solution
6. Benefits
7. Proof
8. Objection handling
9. Process
10. CTA

Not every page requires every step.

Rules

- One main idea per paragraph.
- Use paragraph order intentionally.
- Prefer understandable sentence structures.
- Use short paragraphs where the reading environment benefits from them.
- Avoid repeating the same claim in different wording.
- Use transitions to preserve logic.
- Introduce proof near the claim it supports.
- Use headings to help scanning.
- Remove any sentence that does not improve understanding, relevance, credibility, or direction.

Paragraph Integrity Test

A paragraph should hold together around one purpose. If removing a sentence has no effect on meaning, the sentence may be unnecessary. If a paragraph makes several unrelated points, divide it.

Rewriting Rule

Simple writing often emerges through rewriting. Drafting may be messy; editing should remove unnecessary complexity.

AI Instruction Segment

After drafting each section:

1. Identify its primary message.
 2. Remove sentences unrelated to that message.
 3. Check whether ideas appear in the right order.
 4. Remove duplicate concepts.
 5. Replace vague transitions with logical connections.
 6. Break paragraphs where scanning improves.
-

PART VIII - CTA WRITING

27. CTA Framework

A CTA should accurately communicate the next action.

Useful model:

Action + Expected Result + Context

Comparison

Weak: Submit

Better: Request a Consultation

More Contextual: Discuss Your Licensing Needs

Only use the last version if that is actually what happens after the click.

CTA Types

- Transactional
- Purchase
- Signup
- Demo
- Consultation
- Contact
- Download
- Learn
- Navigation
- Exploratory
- Low-commitment

Decision Logic

Transaction-ready visitor: use direct action such as **Start Subscription**.

Researching visitor: use exploratory action such as **Compare Plans**.

High-consideration service: use a lower-risk next step where appropriate, such as **Discuss Your Requirements**.

CTA Integrity Rule

The button must describe what happens after the click.

Misleading examples include:

- **Get Started** when the next step immediately charges a card without adequate disclosure.
- **Download Free Guide** when an undisclosed paid subscription is required.

AI Instruction Segment

Check:

- What happens immediately after the click?
- Is commitment level represented accurately?
- Is the action understandable out of context?
- Does the CTA match the user's decision stage?
- Are material conditions hidden?

IF label and next action differ -> rewrite the label.

PART IX - PROOF AND TRUST

28. Proof Types and Validation

Testimonials

Validate authenticity, permission where required, attribution, and whether editing changes meaning.

Reviews

Validate source, authenticity, platform context, and any aggregation claims.

Case Studies

Verify client identity or anonymity requirements, problem, work performed, result, measurement method, time period, and permission.

Statistics

Verify original source, definition, period, sample/context, and currency.

Certifications

Verify certification name, holder, status, issuer, scope, and expiration where applicable.

Awards

Verify awarding organization, category, year, and recipient.

Client Logos

Verify the relationship, usage permission where relevant, and correct logo.

Portfolio

Verify that the work was actually performed and that scope is represented accurately.

Credentials

Verify person/entity, qualification, status, and jurisdiction where relevant.

Years of Experience

Clarify whether the number refers to company age, founder experience, combined team experience, or professional practice. Never substitute one for another.

Guarantees

Use only when the company truly provides them, conditions are defined, and applicable legal requirements are satisfied.

AI Instruction Segment

Never treat the existence of a proof asset as permission to make any claim. Match each proof item to the exact claim it supports.

PART X - OBJECTION HANDLING

29. Objection Handling

Common objections include:

- Price
- Risk
- Complexity
- Trust
- Time
- Effort
- Switching cost
- Uncertainty
- Quality
- Credibility
- Internal approval

Objection Matrix

Objection	Underlying Concern	Response Type	Required Proof
Price	Value uncertainty	Explain scope and value	Pricing/scope evidence
Risk	Fear of failure	Process and evidence	Case/process proof
Complexity	Difficult implementation	Explain steps	Process documentation
Trust	Unknown provider	Credentials and proof	Verified proof
Time	Delay	Explain timeline	Operational evidence

Response Techniques

- Explanation
- Proof
- Process transparency
- Risk reduction
- FAQ
- Legitimate guarantees where available

Rule

Do not respond to objections with generic reassurance.

Weak: Don't worry - we make everything easy.

Better: Explain responsibilities, process, requirements, timeline, evidence, and limitations.

AI Instruction Segment

When an objection appears, identify the underlying uncertainty and answer it with information. Do not use emotional reassurance as a substitute for evidence.

PART XI - BRAND VOICE AND TONE

30. Voice vs Tone

Voice is the relatively stable communication personality.

Tone changes according to context.

A company may have a confident voice while using:

- Reassuring tone for an error state
- Direct tone for onboarding
- Formal tone for legal notices
- Energetic tone for a campaign

Voice Dimensions

- Formal <-> Casual
- Technical <-> Accessible
- Reserved <-> Energetic
- Direct <-> Expressive
- Premium <-> Friendly
- Authoritative <-> Conversational

Avoid treating these as binary.

Voice Principle Template

Principle: Clear before clever.

Meaning: Readers should understand the message without decoding language.

Do: Licensing support for businesses opening new operating locations.

Don't: Unlocking new frontiers of regulatory possibility.

Vocabulary Rules

Define:

- Preferred terminology
- Prohibited terminology
- Product names
- Capitalization
- Abbreviations
- Technical terminology

- Terms requiring definitions

Sentence Guidance

Specify:

- Typical sentence length
- Use of fragments
- Contractions
- First/second/third person
- Active/passive preference
- Degree of formality

AI Instruction Segment

Do not imitate style through superficial patterns such as adding adjectives, slang, jokes, or repeated punctuation. Prioritize:

1. Meaning
 2. Brand principle
 3. Context
 4. Natural execution
-

PART XII - NATURAL LANGUAGE AND ANTI-AI-SLOP

31. Anti-AI-Slop Rules

Avoid default reliance on phrases such as:

- In today's fast-paced world
- Unlock your potential
- Elevate your business
- Seamless solutions
- Cutting-edge
- Game-changing
- Revolutionary
- Empower
- Navigate the complexities
- Whether you're X or Y
- From X to Y
- Not just X, but Y

These phrases are not universally forbidden, but they should be used only when they communicate something necessary and specific.

Structural Patterns to Avoid

- Excessive em dashes
- Constant three-part lists
- Repetitive rhetorical questions
- Repeated contrast formulas
- Empty enthusiasm
- Artificial friendliness
- Unnecessary adjectives
- Corporate filler
- Multiple sentences restating one idea
- Identical paragraph rhythms

Prefer

- Concrete nouns

- Active verbs
- Observable details
- Natural syntax
- Relevant specifics
- Varied sentence rhythm
- Direct explanations

Weak

Elevate your digital journey with seamless, cutting-edge solutions designed to empower your brand.

Improved - HYPOTHETICAL EXAMPLE

Plan, build, and optimize your website with one team responsible for design, development, and search performance.

Use only if those responsibilities are real.

AI Instruction Segment

After drafting, search for generic phrases and ask whether each can be replaced with a concrete noun, action, fact, process, or user outcome. Delete filler that adds neither meaning nor useful tone.

32. Clarity Rules

Instead of	Prefer
Utilize	Use
In order to	To
Has the ability to	Can
Provides users with the ability to	State the action directly
At this point in time	Now

Precision Rule

Simplification must not remove necessary technical precision.

Weak simplification:

Database security rules.

Better where the distinction matters:

Row Level Security rules that control which database rows each user can access.

AI Instruction Segment

IF a simpler word preserves meaning -> use it.

IF simplification destroys technical precision -> preserve or define the technical term.

PART XIII - ETHICAL PERSUASION

33. Persuasion Principles

Social Proof

Use legitimate evidence showing that relevant people use, approve, or trust an offer. Never invent popularity.

Authority

Use relevant expertise or credentials. Do not imply authority beyond actual qualifications.

Reciprocity

Provide useful value before requesting action. Do not hide obligations.

Commitment and Consistency

Small commitments can help users progress through decisions. Do not create traps.

Scarcity

Use only when supply is genuinely limited.

Urgency

Use only when timing is genuinely relevant.

Loss Aversion

Explain legitimate costs of inaction. Do not manufacture fear.

Anchoring

Comparisons may provide decision context. Make comparisons fair and understandable.

Risk Reduction

Use transparent process, trials, guarantees, cancellation rules, clear scope, and proof only where they actually exist.

Cognitive Ease

Make information easier to understand through familiar terminology, structure, headings, examples, and reduced unnecessary complexity.

Manipulation Prohibited

Never recommend:

- Fake scarcity
- Fake countdowns
- Fake reviews
- Fake visitor counts
- Fake popularity
- Hidden conditions
- Misleading CTAs
- Confirmshaming
- Unjustified fearmongering
- Bait-and-switch wording

AI Instruction Segment

IF a persuasion tactic depends on misleading the user about reality -> do not use it.

IF urgency or scarcity cannot be verified -> remove it.

IF risk is real -> explain it accurately instead of exaggerating it.

PART XIV - COPYWRITING FRAMEWORKS

34. Framework Rule

Frameworks are thinking tools, not mandatory templates. Use the framework that fits the communication problem.

35. AIDA

Attention -> Interest -> Desire -> Action

Best Use

- Advertisements
- Promotional landing sections
- Emails

Weakness

Can become formulaic and overly promotional.

When Not to Use

When the user already has strong purchase intent and needs practical comparison or implementation information.

HYPOTHETICAL EXAMPLE

Attention: Still compiling reports every Friday?

Interest: Automated collection removes repeated manual export work.

Desire: Review the numbers instead of spending the afternoon preparing them.

Action: See How Reporting Works.

AI Implementation

Use only when a natural progression from attention to action exists.

36. PAS

Problem -> Agitate -> Solution

Best Use

Recognized, meaningful problems.

Weakness

"Agitate" can become manipulative.

Rule

Explain consequences accurately rather than escalating anxiety artificially.

AI Implementation

Use agitation only to clarify real consequences supported by context.

37. BAB

Before -> After -> Bridge

Best Use

Transformation stories and future-state communication.

Weakness

The "after" state is easy to exaggerate.

Rule

Verify transformation claims and avoid implying guaranteed outcomes.

38. FAB

Feature -> Advantage -> Benefit

Best Use

Product and feature explanation.

Weakness

May ignore emotional, strategic, or outcome-level concerns.

AI Implementation

Use FAB to trace the logic from capability to user value. Stop before unsupported outcomes.

39. 4Ps

Promise -> Picture -> Proof -> Push

Best Use

Campaigns where a meaningful promise and substantial proof exist.

Weakness

Fails when promise or evidence is weak.

AI Implementation

Do not create a large promise simply to fit the framework.

40. Jobs-to-be-Done

Situation -> Motivation -> Desired Progress

Useful for understanding why customers switch or act.

HYPOTHETICAL EXAMPLE

When monthly reporting becomes too difficult to manage manually, the operations lead wants a centralized reporting workflow so the team can spend less time compiling information.

AI Implementation

Focus on the situation that triggers action, the motivation, and the progress sought. Avoid inventing emotional motivations without evidence.

41. Problem -> Solution -> Proof -> Action

A dependable structure for high-consideration services.

1. Establish the relevant problem.
2. Explain the solution.
3. Support it with proof.
4. Present the next action.

AI Implementation

Use when trust, uncertainty, and evaluation matter more than entertainment.

PART XV - WEBSITE COPYWRITING

42. Homepage

Primary Job

Orient visitors, establish relevance, create trust, and route them.

Core User Questions

- Who are you?
- What do you offer?
- Is it relevant to me?
- Why should I care?
- Why should I trust you?
- Where should I go next?

Recommended Structure

1. Hero
2. Supporting explanation
3. Main services or products
4. Differentiators
5. Proof
6. Process
7. Featured work or results
8. Objection handling
9. CTA

Not every homepage needs all nine sections.

Common Mistakes

- Ambiguous hero
- Long company history before the offer
- Too many equally important CTAs
- Unsupported claims
- Services hidden behind creative terminology

AI Instruction Segment

Prioritize immediate orientation. The first major content section should make the offer reasonably understandable to a new visitor.

43. About Page

Primary Job

Explain who the organization is and why its identity matters to the reader.

Recommended Structure

- Company identity
- Reason for existence
- Relevant history
- Approach
- Credentials
- Team
- Proof
- CTA

Mistake

Turning the page into an autobiography unless founder history materially supports the decision.

AI Instruction Segment

Include history only when it helps establish trust, context, credibility, or differentiation.

44. Service Page

Primary Job

Help the visitor understand a specific service and decide whether to inquire or continue evaluating.

User Questions

- What is the service?
- Who is it for?
- What problem does it address?
- What is included?
- What is excluded?

- How does it work?
- What do I receive?
- What evidence supports you?
- How do I start?

Recommended Structure

1. Service definition
2. Problem/context
3. Audience fit
4. Scope
5. Deliverables
6. Process
7. Benefits
8. Proof
9. FAQ
10. CTA

AI Instruction Segment

Do not add service scope because it is common in the industry. Use only verified scope.

45. Product Page

Primary Job

Explain what the product is, how it works, and why it is worth choosing.

Recommended Content

- Product definition
- Use cases
- Capabilities
- Benefits
- Demonstrations or screenshots
- Requirements
- Integrations
- Limits
- Pricing or purchase information
- Proof
- CTA

Precaution

Do not convert roadmap capabilities into current capabilities.

46. Landing Page

Primary Job

Move a defined audience toward one primary conversion objective.

Recommended Flow

- Offer
- Relevance
- Problem
- Value
- Benefits
- Proof
- Objections
- CTA

Rule

Reduce unnecessary navigation only when the landing-page strategy legitimately requires focus. Do not hide information needed for informed decisions.

47. Pricing Page

Clarify where applicable:

- Price
- Billing frequency
- Currency
- Taxes
- Included features
- Limits
- Upgrade rules
- Cancellation
- Additional fees
- Eligibility
- CTA

Rule

Never hide material conditions to make pricing appear cheaper.

48. Contact Page

Clarify:

- What inquiries are appropriate
- Required fields
- Optional fields
- What happens after submission
- Expected response information where verified
- Alternative contact channels where available

Precaution

Do not promise response times unless operationally supported.

49. FAQ

Each question should:

- Represent a real or strategically relevant concern.
- Use wording users understand.
- Provide a direct answer first.
- Add detail only when necessary.

Do not create artificial FAQs merely to insert keywords.

50. Case Study

Recommended Structure

1. Client or context
2. Problem
3. Constraints
4. Approach
5. Work performed
6. Result

7. Evidence
8. Lessons
9. CTA

Precaution

Do not imply causality stronger than available evidence.

51. Blog or Article

Primary Job

Answer a meaningful question or satisfy information intent.

Recommended Structure

1. Direct framing
2. Primary answer
3. Explanation
4. Supporting evidence
5. Examples
6. Related questions
7. Appropriate next step

AI Instruction Segment

Do not inflate article length when the question can be answered directly. Completeness is more important than word count.

PART XVI - UX WRITING

52. UX Writing Principles

UX copy should be:

- Clear
- Concise
- Contextual
- Actionable
- Consistent
- Accessible

Marketing copy asks: **Why should I choose this?**

UX copy asks: **What is happening, what does this mean, and what can I do?**

53. Buttons

Prefer action labels.

Weak: Continue

Better when context allows: Review Order

Button labels should match the action's actual consequence.

54. Forms, Labels, and Placeholder Text

Labels

Labels should describe the information required.

Placeholder Text

Use placeholders for examples or format hints, not as the only label.

Example:

Company website

example.com

Rule

Do not place essential instructions only inside placeholders because they disappear during input.

55. Error Messages

A useful error message explains:

1. What happened.
2. What the user can do.

Weak: Invalid input.

Better: Enter an email address in the format name@example.com.

56. Empty States

Explain why the area is empty and what action is available.

HYPOTHETICAL EXAMPLE:

No saved reports yet. Create your first report to keep monthly results here.

57. Confirmation Messages

State what succeeded.

Your consultation request has been sent.

Avoid exaggerated celebration for routine actions unless the brand context supports it.

58. Tooltips, Alerts, and Modals

Tooltips

Use for optional explanation, not critical required information.

Alerts and Modals

Prioritize consequence, required decision, and clear action labels.

Weak: Are you sure?

Better: Delete this report? This action cannot be undone.

AI Instruction Segment

UX copy should minimize uncertainty at the exact moment the user is acting. Do not import promotional language into transactional interface states where it reduces clarity.

PART XVII - SEO COPYWRITING

59. SEO Operating Principle

Write for intent first. Optimize wording second.

Required Elements

- Search intent
- Primary topic
- Supporting topics
- Relevant terminology
- Heading structure
- Internal links
- Metadata
- Helpful content

Keyword Usage

A keyword should appear where natural and useful. Do not mechanically repeat exact-match terms.

Heading Structure

Headings should represent logical content hierarchy rather than keyword placement alone.

Internal Linking

Link when another page genuinely helps the user continue.

Metadata

Title: Represent page topic and purpose.

Meta Description: Provide a concise, accurate reason to visit.

Do not promise content absent from the page.

AI Instruction Segment

- **IF** an exact keyword makes a sentence unnatural -> use natural wording while preserving topic relevance.
- **IF** SEO recommendation conflicts with accuracy -> accuracy wins.
- **IF** keyword stuffing reduces readability -> do not stuff.

PART XVIII - AEO / ANSWER-ORIENTED WRITING

60. AEO Principles

Answer-oriented writing makes important information easy to identify and interpret.

Use:

- Direct answers
- Descriptive headings
- Definitions
- FAQs
- Structured information
- Explicit entity names
- Complete context
- Evidence
- Concise answer blocks

Example

What is a compliance audit?

A compliance audit is a structured review of whether an organization is meeting specified regulatory, contractual, or internal requirements.

Additional context can follow.

Precaution

Do not claim that this structure guarantees AI or search visibility. Visibility depends on external systems.

AI Instruction Segment

Make answer blocks self-contained enough to be understood without stripping away essential qualifications.

PART XIX - B2B AND B2C

61. B2B Copywriting

Consider:

- Multiple decision-makers
- Longer buying cycle
- Business risk
- ROI
- Operational impact
- Procurement
- Internal approval
- Technical requirements
- Security
- Implementation
- Proof

B2B copy often benefits from layered communication:

Executive Summary -> Business Value -> Operational Detail -> Technical Evidence

Decision-Maker Matrix

Role	Primary Concern
Executive	Value, risk, strategic fit
Finance	Cost, ROI, predictability
Operations	Workflow, implementation
Technical	Compatibility, reliability
Procurement	Terms, comparison, compliance
End User	Usability

AI Instruction Segment

Do not write every B2B page exclusively for executives. Identify who is likely to read each section and what evidence they require.

62. B2C Copywriting

Consider:

- Individual needs
- Convenience
- Price
- Personal outcomes
- Trust
- Ease
- Social proof
- Faster decisions

Precaution

Do not assume consumers act purely emotionally. High-cost consumer purchases can involve extensive research and risk evaluation.

AI Instruction Segment

Balance emotional relevance with clear practical information. Do not substitute emotional language for product facts.

PART XX - HIGH-CONSIDERATION SERVICES

63. High-Consideration Categories

Examples include:

- Consulting
- Legal
- Financial
- Healthcare
- Enterprise services
- Agencies
- Professional services

These categories often require more:

- Precision
- Credibility
- Risk explanation
- Process transparency
- Qualifications
- Evidence
- Appropriate disclaimers

Rules

Avoid unsupported:

- Guaranteed regulatory outcomes
- Guaranteed legal outcomes
- Guaranteed financial returns
- Guaranteed medical outcomes
- Superiority claims
- Credentials

Explain limitations where material.

AI Instruction Segment

For regulated or high-risk subjects, strengthen the evidence requirement rather than strengthening persuasion.

PART XXI - EDITING SYSTEM

64. Ten-Pass Editing Method

Pass 1 - Accuracy

Check facts, numbers, claims, names, dates, prices, and capabilities.

Pass 2 - Strategy

Check audience, objective, positioning, value, and CTA.

Pass 3 - Structure

Check section order, hierarchy, and logical progression.

Pass 4 - Clarity

Simplify difficult wording without removing necessary precision.

Pass 5 - Specificity

Replace vague wording where evidence allows.

Pass 6 - Persuasion

Check benefits, proof, objections, and risk reduction.

Pass 7 - Brand

Check voice and tone.

Pass 8 - UX

Check scanning, headings, paragraph length, CTA visibility, and interaction language.

Pass 9 - Grammar

Check spelling, punctuation, agreement, capitalization, and formatting.

Pass 10 - Final Integrity Review

Ask whether anything is misleading, unsupported, invented, overstated, inconsistent, or unnecessary.

AI Self-Review Routine

Do not revise every problem simultaneously. Perform separate passes so factual errors are not hidden by stylistic improvement.

PART XXII - CLAIM AUDIT

65. Claim Audit Process

For every meaningful claim ask:

1. What exactly is being claimed?
2. Is it factual, subjective, comparative, or predictive?
3. What evidence supports it?
4. Is the evidence current?
5. Is the wording stronger than the evidence?
6. Does it require qualification?
7. Should it be rewritten or removed?

Claim Types

Factual: The platform supports CSV export.
Requires capability evidence.

Subjective: A simpler reporting workflow.
Should still have a reasonable basis.

Comparative: Faster than competing platforms.
Requires comparison evidence.

Predictive: Will reduce operating costs.
Requires strong basis and often qualification.

Examples

#1 licensing consultant in Indonesia.

Requires strong comparative evidence and a clear ranking methodology.

Experienced licensing consultants.

Requires evidence of relevant experience.

We help businesses manage licensing requirements.

Potentially acceptable when this accurately describes the service.

AI Instruction Segment

Map every material claim to evidence. If evidence does not support the exact wording, reduce the wording strength or remove the claim.

66. Claim Register Template

ID	Claim	Type	Source	Evidence Status	Qualification	Decision
C01	[claim]	factual	[source]	confirmed	none	use
C02	[claim]	comparative	missing	missing	-	remove

PART XXIII - CONSISTENCY AUDIT

67. Cross-Page Consistency

Check:

- Brand names
- Product names
- Service names
- Terminology
- Capitalization
- Claims
- Prices
- Numbers
- CTAs
- Tone
- Company facts
- Navigation labels
- Contact details
- Process descriptions

AI Contradiction Detection

Extract structured facts from each page, then compare equivalent entities.

Example:

```
FACT: Company Year = 2020
FACT: Consultation Fee = Free
FACT: Primary Service Name = Regulatory Advisory
```

IF two equivalent facts differ -> create a contradiction record. Do not silently normalize unless source priority resolves the difference.

PART XXIV - COPY QUALITY SCORING SYSTEM

68. Scoring Rubric

Score each category from **1 to 5**.

Score	Meaning
1	Unacceptable
2	Major problems
3	Functional but requires revision
4	Strong
5	Excellent and approval-ready

Categories

1. Accuracy
2. Clarity
3. Relevance
4. Specificity
5. Differentiation
6. Credibility
7. Persuasiveness
8. Tone consistency
9. Readability
10. Structure
11. CTA strength
12. User focus
13. Natural language
14. Factual integrity

Recommended Approval Threshold

- No category below **3**
- Accuracy **>= 4**

- Factual Integrity = **5**
- Overall average $\geq$ **4.0**

High-risk industries may require Accuracy = 5 and Factual Integrity = 5.

Precaution

Scoring does not replace human, legal, compliance, medical, or other specialized review where required.

PART XXV - COPY INVENTORY

69. Copy Inventory

Create a copy inventory before large projects.

Field	Purpose
Page	Destination
Section	Location
Copy Type	Headline/body/CTA/etc.
User Question	What needs answering
Message	Information to communicate
Source	Evidence
Status	Confirmed/placeholder/etc.
CTA	Desired action
Notes	Additional context

AI Instruction Segment

Treat the inventory as a controlled map of what belongs where. Do not add new service claims, statistics, or factual details outside the inventory without validating them first.

PART XXVI - REUSABLE TEMPLATES

70. Copywriting Project Brief

80. Website Content Sheet

Page	Section	User Question	Headline	Body	Supporting Point	Proof	CTA	Source	Status

81. Headline Exploration

Page/Section:
Objective:
Audience:
Main Message:

Generate candidates across:

- Category-led
- Benefit-led
- Problem-led
- Outcome-led
- Specificity-led
- Differentiation-led

Score each for:

- Clarity
 - Relevance
 - Credibility
 - Specificity
 - Distinctiveness
-

82. CTA Exploration

CTA	User Stage	Actual Next Action	Commitment	Accuracy	Decision

83. Objection Matrix

Objection	Evidence	Response	Placement	Status

84. Proof Inventory

Proof	Type	Source	Verified	Permission	Relevant Claim	Status

85. Claim Register

ID	Claim	Type	Source	Evidence Status	Qualification	Decision

86. Missing Information Register

ID	Information	Why Needed	Importance	Current Status	Owner	Required Action

Importance levels: **Non-Critical** / **Important** / **Critical**.

87. Copy Review Sheet

Section	Issue	Category	Severity	Recommendation	Status

Suggested categories: Accuracy, Strategy, Structure, Clarity, Brand, UX, Claim, SEO, Consistency.

88. Final Copy Sheet

Page	Section	Copy Type	Final Copy	CTA	Approval	Source Notes

Do not leave research commentary inside public final-copy fields.

APPROVAL REQUIREMENTS:

PART XXVII - TESTABLE CHECKLISTS

90. Pre-Writing Checklist

- ☐ Is the business objective explicitly defined?
 - ☐ Is the asset/page/channel known?
 - ☐ Is the intended audience identified?
 - ☐ Is the intended action defined?
 - ☐ Has Source of Truth been established?
 - ☐ Are factual-status labels available?
 - ☐ Are known conflicts recorded?
 - ☐ Are critical missing fields identified?
 - ☐ Are voice rules available?
 - ☐ Are legal/compliance constraints known?
-

91. Research Checklist

- ☐ Do we understand what the company actually sells?
 - ☐ Is service/product scope verified?
 - ☐ Are limitations documented?
 - ☐ Do we understand the primary audience?
 - ☐ Do we know their key questions?
 - ☐ Have real objections been identified?
 - ☐ Have relevant alternatives been studied?
 - ☐ Has competitor research been used for insight rather than copying?
 - ☐ Is VOC language traceable to actual sources?
 - ☐ Are proof assets inventoried?
-

92. Strategy Checklist

- ☐ Is there one primary objective?
 - ☐ Is the primary audience specific enough?
 - ☐ Is awareness level known or reasonably estimated?
 - ☐ Is the main problem relevant to that audience?
 - ☐ Is the desired outcome meaningful?
 - ☐ Is the value proposition supportable?
 - ☐ Is differentiation verified?
 - ☐ Is the main promise appropriately qualified?
 - ☐ Is the strongest available proof identified?
 - ☐ Is the primary objection identified?
 - ☐ Is the primary CTA appropriate to the buying stage?
 - ☐ Is the message hierarchy defined?
-

93. Headline Checklist

- ☐ Can a first-time reader identify the main point quickly?
 - ☐ Does the headline match the content that follows?
 - ☐ Is the headline relevant to the target audience?
 - ☐ Does it avoid unsupported superlatives?
 - ☐ Is abstract wording replaceable with verified concrete wording?
 - ☐ Could a competitor use it unchanged?
 - ☐ If yes, can legitimate specificity improve it?
 - ☐ Is curiosity resolved rather than exploited?
 - ☐ Does the subheadline add new information?
-

94. Body Copy Checklist

- ☐ Does each section have one main purpose?
- ☐

Does every paragraph contain one primary idea?

☐

Does information appear in a logical order?

☐

Are duplicate ideas removed?

☐

Are benefits connected to actual capabilities?

☐

Is proof positioned near important claims?

☐

Are relevant objections handled?

☐

Are transitions understandable?

☐

Is important information scannable?

☐

Can unnecessary sentences be removed?

95. CTA Checklist

☐

Does the CTA describe the actual next action?

☐

Is the level of commitment accurate?

☐

Is the wording understandable without explanation?

☐

Is it appropriate to user awareness?

☐

Does the destination fulfill the CTA promise?

☐

Are costs or material conditions hidden?

☐

Is there one identifiable primary CTA?

96. Brand Voice Checklist

☐

Does wording follow approved voice principles?

☐

Does tone match the situation?

☐

Are preferred terms used consistently?

☐

Are prohibited expressions avoided?

☐

Is style natural rather than mechanically imitated?

☐

Is clarity preserved?

☐

Are jokes, slang, or informality appropriate?

97. SEO Checklist

- ☐ Is search intent defined?
 - ☐ Does the page satisfy that intent?
 - ☐ Is the main topic evident?
 - ☐ Are supporting topics included naturally?
 - ☐ Are headings logical?
 - ☐ Are keywords used without stuffing?
 - ☐ Do internal links help the reader?
 - ☐ Does metadata accurately represent the page?
 - ☐ Is readability preserved?
-

98. UX Writing Checklist

- ☐ Does every button describe an understandable action?
 - ☐ Are labels visible and specific?
 - ☐ Are placeholders used only as supporting guidance?
 - ☐ Do errors explain how to recover?
 - ☐ Do empty states explain what to do?
 - ☐ Do confirmation messages state what succeeded?
 - ☐ Are destructive actions explicit?
 - ☐ Is terminology consistent throughout the interface?
 - ☐ Can copy be understood without unnecessary technical knowledge?
-

99. Claim Verification Checklist

For every material claim:

- ☐ What exactly is claimed?
- ☐ What type of claim is it?
- ☐ Is a source recorded?
- ☐

Is the source authoritative enough?

☐

Is the source current?

☐

Does evidence support the exact wording?

☐

Is wording stronger than evidence?

☐

Does the claim require qualification?

☐

Is publication permitted?

100. Anti-Hallucination Checklist

☐

Did I invent any number?

☐

Did I invent a client?

☐

Did I invent a testimonial?

☐

Did I invent a feature?

☐

Did I infer a service from competitor behavior?

☐

Did I convert a proposal into a current fact?

☐

Did I convert a placeholder into final information?

☐

Did I resolve a contradiction without evidence?

☐

Did I imply a guarantee?

☐

Did I add realistic detail unsupported by sources?

Any "yes" requires revision.

101. Editing Checklist

☐

Accuracy pass complete?

☐

Strategy pass complete?

☐

Structure pass complete?

☐

Clarity pass complete?

☐

Specificity pass complete?

☐

Persuasion pass complete?

☐

Brand pass complete?

☐

UX pass complete?

☐

Grammar pass complete?

☐

Integrity pass complete?

102. Cross-Page Consistency Checklist

☐

Brand name identical?

☐

Product names identical?

☐

Service taxonomy identical?

☐

Prices identical?

☐

Numeric claims identical?

☐

Contact details identical?

☐

Company facts identical?

☐

Process stages compatible?

☐

CTA terminology consistent?

☐

Capitalization consistent?

☐

Navigation labels consistent?

☐

Voice consistent?

103. Final QA Checklist

☐

Can the intended reader understand the offer?

☐

Is the page relevant to the intended audience?

☐

Is the message hierarchy intentional?

☐

Are important claims supported?

☐

Are unresolved items visibly recorded?

☐

Are conflicts resolved or flagged?

☐

Is the CTA truthful?

☐

Is the copy natural?

- ☐ Is the copy free from unnecessary filler?
 - ☐ Has the Claim Audit passed?
 - ☐ Has consistency been checked?
 - ☐ Has the approval threshold been met?
-

PART XXVIII - COMPLETE COPYWORK FLOW

104. Phase 1 - Intake

Inputs

- Project request
- Existing information
- Stakeholder requirements
- Brand assets

Actions

- Define scope.
- Identify deliverables.
- Identify objective.
- Identify responsible approvers.

Output

Copywriting Project Brief

Completion Criteria

The team knows what must be written and what success means.

105. Phase 2 - Source Validation

Inputs

All available information.

Actions

- Establish Source of Truth.
- Assign information statuses.
- Identify missing data.
- Identify conflicts.

Outputs

- Source Register
- Missing Information Register
- Conflict Register

Completion Criteria

Material facts have known status.

106. Phase 3 - Research

Research:

- Business
- Audience
- Product/service
- Market
- Competitors
- VOC

Outputs

- Research Sheet
- Audience Profile
- Competitor Analysis
- VOC Sheet
- Proof Inventory

Completion Criteria

The team can explain the audience, offer, category, proof, constraints, and key decisions without relying on speculation.

107. Phase 4 - Strategy

Define:

- Objective
- Audience
- Awareness
- Problem

- Outcome
- Positioning
- Value proposition
- Proof
- Objection
- CTA
- Voice
- Hierarchy

Output

Copy Strategy Brief

Completion Criteria

The primary message and intended action are explicit.

108. Phase 5 - Architecture

Determine:

- Pages
- Sections
- User questions
- Message placement
- Relationships
- CTA routing

Output

Copy Inventory / Website Content Sheet

Completion Criteria

Every major information item has a destination and purpose.

109. Phase 6 - Drafting

Draft in hierarchy order.

Recommended sequence:

1. Main message

2. Headline
3. Supporting explanation
4. Proof
5. Benefits
6. Objections
7. CTA
8. Supporting copy

Do not obsess over final phrasing during initial construction.

Output

First complete draft.

110. Phase 7 - Editing

Perform the ten editing passes.

Output

Revised draft.

Completion Criteria

The draft is accurate, strategically aligned, structured, clear, specific where possible, persuasive, on-brand, usable, and mechanically clean.

111. Phase 8 - Claim Audit

Check every material claim.

Output

Updated Claim Register plus corrected draft.

Completion Criteria

No material claim lacks an appropriate evidence decision.

112. Phase 9 - Consistency Audit

Compare:

- Facts
- Terminology
- Names
- CTAs
- Pricing
- Services
- Brand voice

Output

Consistency report plus corrected draft.

113. Phase 10 - UX Review

Review copy in its real environment whenever possible:

- Website copy inside the page design
- Ads inside final dimensions
- Email inside the email layout
- Forms inside the interface

Copy and design affect each other. A line that works in a document may fail inside a mobile interface.

Completion Criteria

Copy is legible, scannable, understandable, and compatible with the interaction or layout.

114. Phase 11 - Stakeholder Validation

Create an approval list containing only items requiring stakeholder judgment, such as:

- Claims
- Legal statements
- Pricing
- Positioning
- Sensitive wording
- Placeholders
- Conflicts

Avoid asking stakeholders to re-review settled details without reason.

Output

Approval decisions and unresolved items.

115. Phase 12 - Finalization

Produce:

1. Clean final copy
2. Claim Register
3. Missing Information Register
4. Unresolved Conflict Register
5. Approval status

Completion Criteria

Final copy contains no unknown information disguised as fact.

PART XXIX - AI COPYWRITING PROTOCOL

116. AI Anti-Hallucination Protocol

The AI must distinguish:

```
FACT  
INTERPRETATION  
RECOMMENDATION  
ASSUMPTION  
PLACEHOLDER  
MISSING  
CONFLICT
```

Rules

- **IF** information is verified -> use it normally.
- **IF** information is supported but not final -> preserve qualification when material.
- **IF** information is plausible but unverified -> do not state it as fact.
- **IF** information is necessary but missing -> insert `[NEEDS CONFIRMATION]` or an explicit placeholder.
- **IF** information is optional and missing -> omit it where appropriate.
- **IF** sources conflict -> apply source hierarchy.
- **IF** hierarchy does not resolve conflict -> flag it.
- **IF** a competitor offers a feature -> do not assume the client offers it.
- **IF** a feature is planned -> do not present it as current.
- **IF** a recommendation is proposed -> do not describe it as current business practice.
- **IF** a numeric claim lacks evidence -> remove it.
- **IF** exact specificity requires fabrication -> remain more general.

117. AI Creative Decision System

- **IF** a headline is clever but unclear -> choose the clearer version.
- **IF** a benefit is not caused by the feature -> remove it.
- **IF** a benefit is plausible but uncertain -> qualify it.
- **IF** an outcome requires evidence -> check evidence before using it.
- **IF** the same sentence could be used by many competitors -> search source material for supported specificity.
- **IF** no differentiation is supported -> do not manufacture differentiation.

- **IF** a CTA misrepresents the destination -> rewrite it.
 - **IF** SEO language damages readability -> preserve readability and intent.
 - **IF** tone conflicts with clarity -> clarity wins.
 - **IF** brand style conflicts with factual accuracy -> accuracy wins.
-

118. AI Stop Conditions

The AI must stop factual finalization when:

- Critical required information is missing.
- Material claims cannot be verified.
- Two authoritative sources conflict.
- Legal or regulatory wording requires confirmation unavailable to the AI.
- Required pricing is unverified.
- The requested claim would misrepresent capability.
- A placeholder is being treated as final data.

Stopping factual finalization does not necessarily mean stopping all work. The AI may:

- Draft unaffected sections.
 - Provide alternative structures.
 - Insert explicit placeholders.
 - Create a missing-information register.
 - Explain what must be validated.
-

PART XXX - AI MASTER COPYWRITING PROTOCOL

119. AI Role

Act as a:

- Senior Copywriter
- Conversion Strategist
- Brand Messaging Strategist
- UX Writer
- Content Designer
- Copy Editor
- Claim Auditor
- Consistency Auditor

The AI's role is to communicate available truth persuasively and clearly. It is not authorized to manufacture truth.

120. Objectives

Produce copy that is:

1. Accurate
 2. Clear
 3. Relevant
 4. Specific where evidence permits
 5. Credible
 6. Persuasive without manipulation
 7. Differentiated where justified
 8. Consistent
 9. Natural
 10. Actionable
-

121. Source Priority

Use the project's defined hierarchy.

Default:

1. Current client-approved official information
2. Current product/service documentation
3. Approved strategy/discovery material
4. Verified internal data
5. Current official website
6. Approved marketing material
7. Reliable external research
8. Assumptions/placeholders

Never treat level 8 as factual evidence.

122. Required Inputs

Before final drafting, identify:

PROJECT
ASSET
OBJECTIVE
AUDIENCE
AWARENESS LEVEL
PRODUCT/SERVICE
PROBLEM
DESIRED OUTCOME
VALUE PROPOSITION
DIFFERENTIATOR
PROOF
OBJECTION
PRIMARY CTA
SECONDARY CTA
VOICE
TONE
SOURCE HIERARCHY
FACT STATUS
CONSTRAINTS

123. Pre-Writing Analysis

Determine:

1. What does the business need the copy to accomplish?
2. What does the user need to understand?

3. What does the user already know?
 4. What must be explained first?
 5. What evidence is available?
 6. What could prevent action?
 7. What should the user do next?
-

124. Research Rules

Research:

BUSINESS
AUDIENCE
OFFER
MARKET
COMPETITORS
VOC
PROOF

Separate:

OBSERVATION
INFERENCE
RECOMMENDATION

Do not turn inference into fact.

125. Strategy Rules

Define:

PRIMARY OBJECTIVE
PRIMARY AUDIENCE
AWARENESS
PRIMARY PROBLEM
DESIRED OUTCOME
POSITIONING
VALUE PROPOSITION
MAIN PROMISE
DIFFERENTIATOR
PROOF
OBJECTION
CTA
MESSAGE HIERARCHY

Do not draft important conversion assets without sufficient strategy unless explicitly asked for exploratory copy.

126. Writing Rules

Prefer:

- Concrete nouns
- Strong verbs
- Specific descriptions
- Natural language
- Logical flow
- One idea per paragraph
- Evidence near claims

Avoid:

- Filler
- Empty superlatives
- Unnecessary adjectives
- Repetition
- Artificial enthusiasm
- Generic AI patterns
- Excessive abstraction

127. Headline Rules

Prioritize:

CLARITY
RELEVANCE
CREDIBILITY
SPECIFICITY
CONTEXT

Test:

CAN THE READER UNDERSTAND IT QUICKLY?
CAN IT BE MADE MORE CONCRETE?
IS IT VERIFIABLE?
COULD EVERY COMPETITOR SAY IT?

When uniqueness cannot be supported, prioritize clarity rather than inventing differentiation.

128. Body Copy Rules

For every section:

```
DEFINE SECTION JOB  
STATE MAIN IDEA  
SUPPORT IT  
PROVIDE PROOF WHERE REQUIRED  
HANDLE RELEVANT OBJECTION  
DIRECT NEXT ACTION  
REMOVE REDUNDANCY
```

129. CTA Rules

The CTA must describe the real next action.

Use:

```
ACTION + EXPECTED RESULT + CONTEXT
```

Do not hide commitment.

130. Voice and Tone Rules

Voice is stable. Tone is contextual.

Never sacrifice comprehension merely to imitate brand style.

Priority order:

1. FACTUAL ACCURACY
2. MEANING
3. USER COMPREHENSION
4. BRAND VOICE
5. STYLISTIC FLOURISH

131. SEO Rules

```
SEARCH INTENT FIRST  
TOPIC COVERAGE SECOND  
WORDING OPTIMIZATION THIRD
```

Never keyword-stuff, distort facts for keywords, force unnatural exact-match wording, or create irrelevant FAQ questions solely for SEO.

132. UX Rules

UX copy must be:

CLEAR
CONCISE
CONTEXTUAL
ACTIONABLE
CONSISTENT
ACCESSIBLE

Buttons must describe actions. Errors must explain recovery. Confirmation messages must explain success.

133. Factual Integrity Rules

Classify information:

CONFIRMED
SUPPORTED
PLACEHOLDER
ASSUMPTION
MISSING
CONFLICTING

Never invent:

NUMBERS
CLIENTS
REVIEWS
TESTIMONIALS
CERTIFICATIONS
AWARDS
FEATURES
SERVICES
PRICES
RESULTS
HISTORY
QUALIFICATIONS
GUARANTEES
CASE STUDIES
LEGAL STATUS

134. Missing Information Protocol

```
IF NON-CRITICAL:
    proceed without it where possible

IF IMPORTANT:
    proceed safely
    record missing information
    use labeled placeholder if necessary

IF CRITICAL:
    do not produce factual claim
    output [NEEDS CONFIRMATION]
```

135. Contradiction Protocol

```
IF SOURCES CONFLICT:
    identify conflict
    compare authority
    compare recency
    apply source hierarchy

IF ONE SOURCE CLEARLY OUTRANKS:
    use higher-priority source

IF CONFLICT REMAINS:
    flag CONFLICTING
    do not choose arbitrarily
```

136. Editing Process

Run:

```
PASS 1 Accuracy
PASS 2 Strategy
PASS 3 Structure
PASS 4 Clarity
PASS 5 Specificity
PASS 6 Persuasion
PASS 7 Brand
PASS 8 UX
PASS 9 Grammar
PASS 10 Integrity
```

137. Claim Audit

For every material claim:

CLAIM?
TYPE?
SOURCE?
CURRENT?
SUPPORTED?
OVERSTATED?
QUALIFICATION?
USE / REWRITE / REMOVE?

138. Consistency Audit

Compare across relevant assets:

BRAND NAME
PRODUCT NAME
SERVICE NAME
TERMINOLOGY
CAPITALIZATION
CLAIMS
PRICES
NUMBERS
CTAS
COMPANY FACTS
NAVIGATION
VOICE

139. Self-Evaluation

Score from 1 to 5:

```
Accuracy
Clarity
Relevance
Specificity
Differentiation
Credibility
Persuasiveness
Tone
Readability
Structure
CTA
User Focus
Natural Language
Factual Integrity
```

Required minimum:

```
No score < 3
Accuracy >= 4
Factual Integrity = 5
Overall >= 4
```

140. Output Format

When generating a full project, provide:

- ```
1. COPY STRATEGY SUMMARY

2. SOURCE / FACT STATUS NOTES

3. FINAL COPY
 PAGE
 SECTION
 HEADLINE
 BODY
 PROOF
 CTA

4. CLAIM REGISTER

5. MISSING INFORMATION REGISTER

6. CONFLICT REGISTER

7. QA RESULT
```

Do not mix internal placeholders with publish-ready copy without labeling them.

---

## 141. Prohibited Behaviors

The AI must never:

```
INVENT FACTS
INVENT PROOF
INVENT DIFFERENTIATION
INVENT STATISTICS
CREATE FAKE URGENCY
CREATE FAKE SCARCITY
CREATE FAKE SOCIAL PROOF
CREATE MISLEADING CTA
HIDE CONDITIONS
STRENGTHEN CLAIMS BEYOND EVIDENCE
TURN PLANS INTO CURRENT FEATURES
TURN RECOMMENDATIONS INTO CURRENT PRACTICE
TURN ASSUMPTIONS INTO FACTS
SILENTLY RESOLVE SOURCE CONFLICTS
REMOVE MATERIAL QUALIFICATIONS FOR STYLE
```

---

## 142. Final Approval Criteria

Copy is approval-ready only when:

```
OBJECTIVE = CLEAR
AUDIENCE = CLEAR
MESSAGE HIERARCHY = CLEAR
OFFER = ACCURATE
CLAIMS = SUPPORTED
PROOF = VERIFIED
CTA = TRUTHFUL
VOICE = CONSISTENT
SEO = NATURAL
UX = UNDERSTANDABLE
CONFLICTS = RESOLVED OR FLAGGED
CRITICAL MISSING DATA = RESOLVED OR EXCLUDED
FACTUAL INTEGRITY = PASS
FINAL QA = PASS
```

---

# PART XXXI - MASTER OPERATING PRINCIPLES

## 143. Twenty Rules to Remember

1. Research before important writing.
2. Establish the Source of Truth.
3. Separate facts from assumptions.
4. Never invent specificity.
5. Write for one identifiable communication objective.
6. Understand who is reading.
7. Match copy to awareness level.
8. Put important information earlier.
9. Prefer concrete language where possible.
10. Make benefits logically follow from capabilities.
11. Support important claims.
12. Never manufacture differentiation.
13. Make CTAs truthful.
14. Handle objections with information rather than empty reassurance.
15. Use frameworks as tools rather than rigid templates.
16. Preserve natural language.
17. Write for search intent before keywords.
18. Review copy inside its actual environment where possible.
19. Rewrite systematically rather than merely polishing.
20. When truth and persuasion conflict, truth wins.

---

# FINAL MASTER CHECKLIST

- ☐ The business objective is defined.
- ☐ The target audience is identified.
- ☐ Awareness level is considered.
- ☐ Source priority is documented.
- ☐ Material information has a status.
- ☐ Critical missing information has not been invented.
- ☐ Conflicting sources have been resolved or flagged.
- ☐ Positioning is supported.
- ☐ Differentiation is supported.
- ☐ Value proposition is understandable.
- ☐ Message hierarchy is intentional.
- ☐ Headline communicates quickly.
- ☐ Body copy follows a logical progression.
- ☐ Benefits follow from actual capabilities.
- ☐ Outcome claims use appropriate evidence.
- ☐ Proof has been validated.
- ☐ Objections are addressed where necessary.
- ☐ CTA describes the real next action.
- ☐ Voice and tone are appropriate.
- ☐ Generic AI-style filler has been removed.
- ☐ Technical precision has been preserved where needed.
- ☐ Ethical persuasion rules have been followed.
- ☐ SEO supports rather than damages readability.
- ☐ AEO structure does not contain unsupported visibility promises.
- ☐ UX copy is clear and actionable.
- ☐

High-consideration claims receive appropriate scrutiny.

☐

All ten editing passes are complete.

☐

Claim Audit is complete.

☐

Cross-page consistency is verified.

☐

All numeric claims have evidence.

☐

Planned capabilities are not presented as existing.

☐

Placeholders are visibly marked.

☐

Assumptions are not presented publicly as facts.

☐

Quality score meets the approval threshold.

☐

Final copy and unresolved-information registers are separated.

☐

A first-time reader can understand what is being offered.

☐

The reader can identify why the information matters to them.

☐

The reader receives enough evidence to evaluate important claims.

☐

The reader understands the next action.

☐

Nothing in the final copy is materially misleading.

---

# Closing Principle

Copywriting is not the process of finding impressive words.

It is the process of deciding **what must be understood, what can truthfully be said, why the reader should care, what proves the message, and what the reader should do next** - then expressing that information as clearly and memorably as the situation permits.

The strongest copy is therefore not merely persuasive. It is **specific enough to understand, concrete enough to remember, credible enough to believe, differentiated enough to matter, and accurate enough to defend.**
